IAP

IAP is setup using the **IAP Settings** window which can be opened by selecting the menu item **Tools -> Bizzy Bee Games -> IAP Settings** (Or clicking the button on the IAPManagers inspector).

Enable IAP

To enable IAP first you need to import the Unity plugin from the Services window. Open the Services window and turn on IAP then click the Import button:

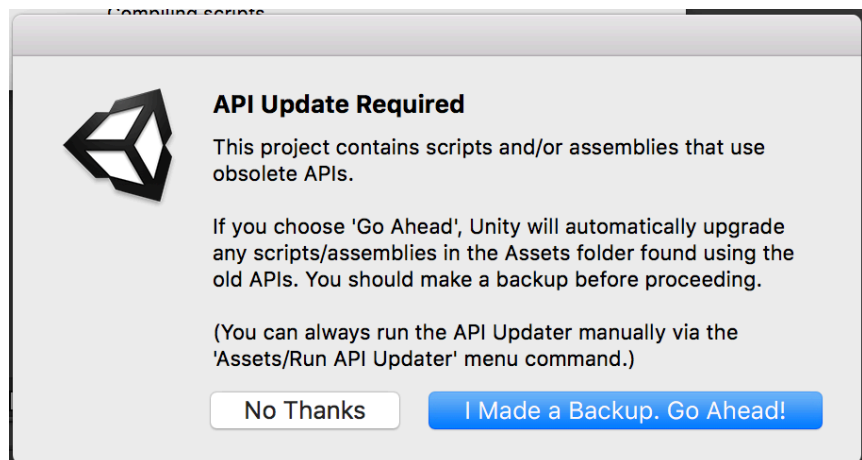

Once it has finished importing you can open the IAP Settings window and click the Enable IAP button which will enable the code in the project.

IMPORTANT!!!

If you get this dialog box:

You **MUST** click the **I Made a Backup. Go Ahead!** button. If you don't you will not be able to enable IAP in IAP Settings window.

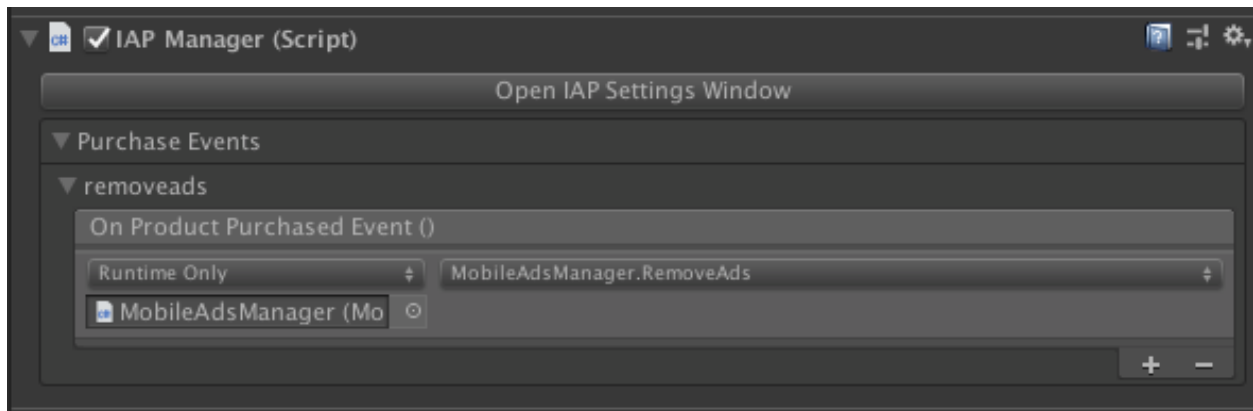

Add Product Ids

To add products open the IAP Settings window and add a Product Info for each product in your game.

Once you add a new product an entry will appear on the IAPManager's inspector. Here you can add events for when the product is purchased:

Purchase A Product

To invoke the purchasing of a product you can use the **IAPProductButton** component.

The Product Id dropdown will contain all the products you created in the IAPSettings. When the button is clicked in the game the IAPManager's BuyProduct method will be called with selected Product Id. You can also call the BuyProduct method manually like so:

IAPManager.Instance.BuyProduct(string productId);

You can also listen for successful product purchases with the OnProductPurchases action like so:

IAPManager.Instance.OnProductPurchases += YourMethod;

Troubleshooting

You should use the TestScene located in the Scenes folder to test if you have setup IAP correctly. The scene will create a button for each product in the IAPSettings window which you can click to purchase the product. Logs will output on the screen to show and errors that may occur.
